

BROKEN BOW II

The 75-megawatt (MW) Broken Bow II is Sempra U.S. Gas & Power's newest wind project. Located in wind-rich Custer County, Nebraska, Broken Bow II will create a new source of clean electricity and provide an economic boost to surrounding communities.

The project is expected to create about 300 construction jobs at peak, with construction expected to get underway in January 2014. When complete, Broken Bow II will utilize forty-three wind turbines to generate enough electricity to power about 30,000 Nebraska homes.

The entire output from the wind farm has been sold to the Nebraska Public Power District under a 25-year contract.

BENEFITS

- Creates about 300 construction jobs at peak
- Generates a new source of affordable electricity for consumers
- Economic benefits include new sources of revenue for local land owners without disrupting farming and ranching operations
